Dear Readers,

We are pleased to launch the 18th edition of our Industry Multiples in India. This report provides an overview of trading multiples for various key industries in India as of September 30, 2022, using constituents belonging to the S&P BSE Large Cap, S&P BSE Mid Cap and S&P BSE SmallCap indices.

As per the International Monetary Fund's (IMF's) World Economic Outlook update in July 2022, the tentative recovery in 2021 has been followed by increasingly gloomy developments in 2022. The global economic output contracted in the second quarter of CY 2022, because of downturns in China and Russia, while the U.S. consumer spending was below expectations. Several shocks have hit the world economy which was already weakened by the COVID-19 pandemic, and these were caused by higher than expected inflation levels, especially in the United States and the major European economies, triggering of tighter financial conditions, unanticipated slowdown in China, reflecting COVID-19 outbreaks and lockdowns and further negative spillovers from the Russia-Ukraine war.

The economic growth forecast is expected to slow from 6.1 percent last year to 3.2 percent in 2022, which is 0.4 percent lower than the IMF's April 2022 World Economic Outlook. Slow economic growth in early 2022 reduced household purchasing power, and tighter monetary policy drove a downward revision in economic growth of 1.4 percent in the United States. Further the lockdown in China and the deepening real estate crisis have led expected economic growth to be revised downward by 1.1 percent, with major global spillovers. Further in Europe, significant downgrades in economic growth reflect spillovers from the Russia-Ukraine war and tighter monetary policy. Global inflation has been revised up due to increases in food and energy prices. Imbalances in supply and demand are anticipated to make inflation levels reach 6.6 percent in developed economies and 9.5 percent in emerging and developing economies. In 2023, due to monetary policies to curb inflation, global output will be expected to grow by only 2.9 percent.

The FTSE has declined by 3.8 percent between Q2 CY 2022 to Q3 CY 2022, whereas DAX and EURO STOXX 50 have declined by 5.2 percent and 4.0 percent, respectively, during the same period. Further, the S&P 500 and MSCI World Index have declined by 5.3 percent and 5.7 percent, respectively, between Q2 CY 2022 to Q3 CY 2022.

As per media reports, in September 2022 Moody's Investors Service slashed India's economic growth projection for 2022 to 7.7 percent on account of rising interest rates, uneven monsoon, and slowing global growth which will dampen economic momentum on a sequential basis.

In May 2022, Moody's had projected India's GDP to expand by 8.8 percent for this year. The economy grew by 8.3 percent in 2021 and contracted by 6.7 percent in 2020, the year when the COVID-19 pandemic struck. In its Global Macro Outlook 2022-23 update, Moody's indicated India's central bank is likely to remain hawkish this year and maintain a reasonably tight policy stance in 2023 to prevent domestic inflationary pressures from building further.

Media reports further suggest that the spillover effect from the Russia-Ukraine war also fell upon India where the India indices fell, inflation levels reached to record high, the INR depreciated, and the foreign exchange reserves took a hit. However, the impact wasn't felt as much as other major economies faced similar challenges. Despite high volatility levels, the Indian economy has shown resilience, and the economy seems to be recovering. As per other media reports, the country's retail inflation moved higher to 7.0 percent in August 2022 due to higher food prices. The figure stood at 6.7 percent in July 2022. The consumer price index-based inflation continued to stay above the Reserve Bank of India's comfort level of 6 percent for the eighth straight month in 2022. The figure stood at 5.6 percent in December 2021.

The Indian Stock Indices, i.e., BSE Sensex and NSE Nifty 50 rose by approximately 8.3 percent from June 2022 through September 2022 and declined by approximately 6.5 percent since the current year's high.

Foreword – Continued

Valuation Advisory Services

Auto Parts and Equipment Sector:

We observed that the market capitalization of companies in the Auto Parts and Equipment industry considered in our analysis have increased by 16.6 percent from Q2 CY 2022 to Q3 CY 2022. As per media reports, The Indian economy has always imported more auto parts and equipment than it exported. During the Q3 CY 2022, for the first time India witnessed a trade surplus of USD 700 million. India mostly supplies original equipment manufacturers ("OEM") in the automotive industry and their tier-I suppliers in large external markets. European and North American exports mainly account for two-thirds of these exports. Further, these economies witnessed a swift recovery in their industrial production on accounts of sustained government support in the aftermath of COVID-19. Eventually this led to an increase in demand for auto components across segments and further led to companies ramping up their production levels. It was further observed that manufacturers across the globe were moving to diversify their sourcing and supplies outside of China. This diversification strategy is expected to benefit India as a favorable low-cost alternative for large auto manufacturers.

As per the Automotive Component Manufacturers Association of India (ACMA), the sector reported a turnover of INR 4.2 lakh crore in FY 2021-22, a growth of 23.0 percent over 2020-21, as passenger and commercial vehicle production increased by 20 percent and 30 percent, respectively, due to increased demand and fewer supply chain disruptions. The S&P BSE Auto index rose by 9.0 percent from Q2 CY 2022 to Q3 CY 2022, whereas the NSE Auto index rose by 8.5 percent for the same period.

IT Sector:

We observed that the market capitalization of companies in the IT industry considered in our analysis have increased by 2.7 percent from Q2 CY 2022 to Q3 CY 2022. However, the multiples have experienced a downward trend. As per media reports, the sharp underperformance is because of concerns that companies might scale back their IT budgets amid an uncertain global growth outlook. IT stocks are expected to move to the narrative of whether the U.S. has a soft landing or a deep recession. In August 2022, foreign portfolio investors (FPIs) pumped USD 6.4 billion into the domestic markets. However, IT stocks received only a trickle at USD 50.0 million — and it was only the first positive month of inflow for the sector after a year. Over the past one year, FPIs have sold IT shares worth nearly USD 11.0 billion, with sectoral allocation to tech stocks falling to its lowest level since March 2018. Further, as per media reports, attrition in the IT industry further aggravates the problem where large IT companies are struggling with 23-25 percent of attrition rate which impacts their profitability. The S&P BSE IT index declined by 2.9 percent from Q2 CY 2022 to Q3 CY 2022, whereas the NSE IT index declined by 3.1 percent during the same period.

Consumer Finance Sector:

We observed that the market capitalization of companies in the Consumer Finance industry considered in our analysis have increased by 17.2 percent from Q2 CY 2022 to Q3 CY 2022. As per media reports, since CY 2020, the consumer finance industry was constrained by a 3-4 percent Asset Under Management (AUM) growth. The industry is expected to see the AUM grow by 11-12 percent to a four year high of INR 13.0 trillion by the end of the year on account of macroeconomic tailwinds. Auto loans, which make part of 46-50 percent AUM of the industry, will help the industry achieve the double-digit growth rate. Used vehicle financing, with its higher yields, will see higher growth and will drive the Non-Banking Financial Company (NBFC) volume in vehicle finance space. Strong demand from the infrastructure sector as well as demand for fleet replacement and focus on last-mile connectivity will help commercial vehicle sales; pent-up demand and new launches will drive car and utility vehicle sales. The S&P BSE Financial Service index rose by 14.5 percent from Q2 CY 2022 to Q3 CY 2022, whereas the NSE Financial Service index rose by 13.1 percent during the same period.

Health Care Facilities and Services:

We observed that the market capitalization of companies in the Health Care Facilities and Services industry considered in our analysis have increased by 14.2 percent from Q2 CY 2022 to Q3 CY 2022. Indian hospitals are structurally well-placed, with the momentum expected to continue from a robust Q2 CY 2022. This momentum is likely to be driven by sequential in-patient volume and, thus, higher in-patient conversion. Another important factor could be the incremental elective surgeries, due to pent-up demand, post COVID-19 led complications and higher international patients mix which is expected to improve sequentially and reach pre-COVID-19 levels. Since the onset of COVID-19, Indian hospitals have continued to maintain a cost rationalization drive, keeping doctors on variable payroll. These are made possible due to technological developments in India, including optical initiatives like teleconsultation and digital app-based drives for treating patients at remote locations. The S&P BSE Healthcare index rose by 8.0 percent from Q2 CY 2022 to Q3 CY 2022 whereas the NSE Healthcare index rose by 9.3 percent during the same period.

Summary: Multiples by Sector

An industry must have a minimum of five company participants to be calculated. For all reported multiples in India, we have considered companies forming part of Standard and Poor's ('S&P') BSE 500 Index. Sample set includes publicly-traded companies in India (private companies are not included). Source: Data derived from S&P Capital IQ databases.

Any outliers in the industry have been excluded from the above analysis.

EV = Enterprise Value = Market value of equity on diluted basis plus book value of debt plus preferred stock less cash and cash equivalents; Sales = Revenue for latest 12 months; EBITDA = Earnings before interest, taxes, depreciation and amortization for latest 12 months; P/E = Share price divided by earnings per share on a diluted basis; P/B = Share price/book value per share on a diluted basis where book value per share equals total book value of equity divided by diluted number of shares. Return on equity = Net income / shareholder's equity; adjusted ROE is calculated as follows: ROE x (1-dividend payout ratio); and market value of equity is computed using diluted number of shares.

Industry Definitions

The industry classification for the companies represented in this report is based on the 2017 Global Industry Classification Standard®(GICS®). Below represents a brief description of sub-industries which are forming part of a particular industry based on the 2017 GICS® guidelines:

Consumer Discretionary	
Auto Parts and Equipment	Companies that manufacture parts and accessories for automobiles and motorcycles, including tires and rubber.
Automobile Manufacturers	Companies that produce mainly passenger automobiles and light trucks. Also includes companies produce motorcycles, scooters or three-wheelers.
Media	Owners and operators of television or radio broadcasting systems, including radio and television, broadcasting, radio networks, and radio stations; providers of cable or satellite television and satellite radio services; cable networks and program distribution. Companies into advertising, marketing or public relations services. Also, publishers of newspapers, magazines and books in print or electronic formats.
Apparel	Manufacturers of apparel, accessories and luxury goods. Includes companies primarily producing designer handbags, wallets, luggage, jewelry and watches, and manufacturers of textile and related products.
Household Appliances	Manufacturers of electric household appliances and related products. Includes manufacturers of durable household products, power and hand tools, including garden improvement tools but excluding Televisions and other audio and video products.
Financials	
Banks	Commercial diverse institutions which have a national footprint whose revenues are derived primarily from conventional banking operations, have significant business activity in retail banking and small and medium corporate lending and provide a diverse range of financial services. This also includes regional banks that tend to operate in limited geographic regions and excludes investment banks.
Consumer Finance	Providers of consumer finance services, including personal credit, credit cards, lease financing, travel-related money services and pawn shops.
Diversified Financial Services	Financial exchanges for securities, commodities, derivatives and other financial instruments, and providers of financial decision support tools and products including ratings agencies. Providers of a diverse range of financial services and/or with some interest in a wide range of financial services including banking, insurance and capital markets, but with no dominant business line.
Capital Markets	Financial institutions primarily engaged in diversified capital markets activities, including a significant presence in at least two of the following areas: large/major corporate lending, investment banking, brokerage and asset management. Includes financial exchanges for securities, commodities, derivatives and other financial instruments.

Global Industry Classification Standard® (GICS®) was developed by S&P Dow Jones Indices, an independent international financial data and investment services company and a leading provider of global equity indices, and MSCI, a premier independent provider of global indices and benchmark-related products and services.

Umakanta Panigrahi

Managing Director, Valuation Advisory Services.

Mumbai

T +91 (0)22 6623 1002

Umakanta.Panigrahi@Kroll.com

Umakanta is a managing director in Kroll's Valuation Advisory Services practice, based in Mumbai. In his current role, he is responsible for the overall financial valuation and portfolio valuation practices of West and South India. He has over 15 years of experience in financial advisory services, including valuation, fairness opinion, disputes, restructuring, equity research, credit research and other advisory services. Umakanta has managed a range of mandates, including business valuation, intellectual property valuation and complex capital structure valuation.

Prior to joining Kroll, Umakanta worked with the Financial Advisory Services practice of Deloitte and Investment Research & Valuation team of Evalueserve.

He has managed and executed a range of financial advisory engagements across several industries, including energy, utilities, infrastructure, private equity, insurance and financial services, health care, telecom, media and entertainment, retail and IT and ITES, for mergers & acquisitions, accounting and tax reporting, transfer pricing, litigation, dispute resolution and other strategic purposes. He has also advised several clients on swap ratio determination, corporate finance, business plan development and review, exit strategies and shareholders' disputes.

His specialization includes early-stage companies' valuation, including the valuation of complex financial instruments (such as complex convertible instruments, earn-out and contingent payments, cross-currency interest rate swaps, options and other hedging instruments). He has also advised several companies on distress debt transaction, earn-out structuring and ESOP structuring.

Umakanta holds an MBA and a bachelor's degree in business administration from Utkal University. Umakanta is also a member of the Royal Institution of Chartered Surveyors (MRICS) under Valuation of Business and Intangible Assets pathway and is certified in Entity and Intangible Valuations™ (CEIV™) from the American Society of Appraisers.
