## INTRODUCTION

Duff \& Phelps is pleased to launch the 2020 U.S. Goodwill Impairment Study (the "2020 Study"), now in its 12th year of publication. The 2020 Study examines general and industry goodwill impairment (GWI) trends through December 2019 of over 8,800 publicly traded companies incorporated in the U.S.

Also included in this year's edition is an expanded look at the largest 30 impairments recorded during 2019, a feature that debuted in last year's study.

Recognizing the significance of a recent global health event, this study also touches on the impact of the COVID-19 pandemic on goodwill impairments taken by U.S. based companies up to the time of writing.* Times of crises and significant economic recessions always place an additional focus on impairments recorded by publicly traded companies.

Goodwill and impairment continue to be topics of interest to standard setters and stakeholders. Both the Financial Accounting Standards Board (FASB) and the International Accounting Standards Board (IASB) have current projects addressing goodwill and impairment. More developments in this area are expected to take place in 2021.

[^0]
## HIGHLIGHTS OF THE 2020 STUDY

Total GWI recorded by U.S. public companies fell $10 \%$, from $\$ 78.9$ billion (bn) in 2018 to $\$ 71.0$ bn in 2019, but this was still the second highest level since the 2008 global financial crisis.* Moreover, the 2018 aggregate GWI amount was significantly

Total GWI
(U.S. Public Companies)
 impacted by a single GWI event of $\$ 22.1 \mathrm{bn}$, recorded by General Electric (GE). If GE's impairment event was excluded from the 2018 totals, aggregate GWI would have risen by 25\% in 2019 (from \$56.7 bn in 2018).

Additionally, the number of GWI events increased by $4 \%$, from 307 in 2018 to 318 in 2019. The size of impairments has generally become larger, with the average GWI per event (excluding GE's 2018 impairment) rising by $21 \%$ in 2019 to $\$ 223$ million (mn), or a drop of $13 \%$ if GE was included.

Trade tensions between the U.S. and its main trading partners (particularly China), combined with a Brexit impasse, created significant uncertainty among companies and global investors in late 2018 and early 2019. Most major economies saw growth decelerate in 2019, with U.S. real GDP moderating to $2.3 \%$. Nevertheless, U.S. investors grew optimistic into 2019 and a "Phase 1" trade deal announced in October 2019 between the U.S. and China spurred new stock market record highs.

M\&A activity by U.S. publicly traded companies saw deal value drop marginally (by 4\%) in 2019 relative to the record levels achieved in 2018, while deal volume fell $18 \%$. Yet, 2019 still marked the secondbest year in M\&A deal value since we began tracking these statistics in 2008. This led to $\$ 391$ bn of goodwill being added to U.S. public companies' balance sheets in 2019. However, the onset of the COVID-19 pandemic put a damper on M\&A activity by U.S. acquirers, with the number of closed deals in 2020 dropping to the lowest level in the study's records (statistics begin in 2008). ${ }^{+}$

[^1]From an industry standpoint, GWI increased or remained at similar levels in seven out of ten industries analyzed, with Industrials and Consumer Discretionary being notable exceptions. Industrials saw its aggregate goodwill impairment drop by over 80\% in 2019 to $\$ 4.5 \mathrm{bn}$. However, excluding the top impairment event in 2018 (GE's \$22.1 bn), aggregate impairments in Industrials have remained at comparable levels over the last four years. In 2019, the industries with the largest increase in GWI over 2018, are as follows, in order of magnitude ( $\$$ in billions):

- Communication Services (\$8.6 to \$19.7)
- Information Technology (\$2.7 to \$8.1)
- Consumer Staples (\$9.5 to \$12.9)

Communication Services' aggregate GWI amount more than doubled from 2018 to 2019, reaching its highest level since 2007. However, 2007 was dominated by a single large impairment event (Sprint-Nextel at $\$ 29.7$ bn out of the $\$ 29.8$ bn industry total), whereas 2019 impairments affected the industry more broadly. Traditional broadband, video and voice service providers were under pressure from new entrants (vertical integration and disrupting start-ups), as well as large providers that underwent M\&A consolidation.

Information Technology's aggregate GWI amount tripled from 2018 to 2019, reaching its highest level since 2015. After seeing steep declines in GWI for the two years following 2015, the trend appears to have reversed, with GWI for this industry increasing for two consecutive years.

Consumer Staples reached a new record high in aggregate GWI since we began collecting statistics in 2005. Established companies are struggling with shifting consumer tastes and competition from new brands and/or lower prices. GWI in this industry has now increased for three consecutive years.

CONSUMER STAPLES GWI (USD in bn)

## 2020 STUDY: LOOKING BACK AND LOOKING AHEAD

The 2020 Study captures 8,800+ public companies incorporated in the U.S.* In 2019, the top five impairments totaled $\$ 25.5 \mathrm{bn}$, while the top 10 impairments reached $\$ 37.4$ bn, accounting respectively for nearly $36 \%$ and $53 \%$ of the aggregate GWI of $\$ 71.0 \mathrm{bn}{ }^{+}$

Looking at 2020, the COVID-19 pandemic was the biggest challenge for U.S. companies, as the related economic recession is expected to be the most severe since World War II. Certain companies benefitted from stay-at-home and lockdown policies, while others struggled to survive without the physical presence of consumers. Even within the same industry, there was a marked divergence in performance, depending on the business model and how quickly a company was able to adapt to the new reality.

At the time of writing, the disclosed top 10 GWI events for 2020 reached a combined \$54 bn, far surpassing the top 10 in 2019. Although full 2020 calendar year-end results for U.S. public companies will not be known for some time, early reporting points to overall GWI already exceeding $\$ 120$ bn in 2020. For perspective, in 2008, at the height of the global financial crisis, U.S. companies recorded a total GWI of $\$ 188 \mathrm{bn}$, according to our prior studies. Should the final 2020 aggregate GWI figures remain at a level lower than that in 2008, it will be partly a reflection of the unprecedented level of support provided by both the Federal Reserve (with swift implementation of liquidity-enhancing monetary policies) and the U.S. government (with large fiscal stimulus packages) in response to the COVID-19 crisis. By a wide margin, the most impacted industry so far is Energy, a reflection of the collapse in global oil prices following the classification of COVID-19 as a pandemic. ${ }^{\ddagger}$

## 1. Procter and Gamble

- Recognized $\$ 6.8$ bn of goodwill impairment in its Shave Care reporting unit, which is the global leader in the blades and razors market. This reporting unit is comprised entirely of acquired businesses. A substantial portion of the impairment stemmed from the mega acquisition of Gillette in 2005.
- The impairment was largely driven by a significant appreciation of the U.S. dollar relative to a number of currencies, a drop in sales volume caused by changing grooming habits (primarily in developed markets) and an increasingly competitive market environment in the U.S. and elsewhere. Collectively, these factors resulted in lower cash flow projections.
- A \$1.6 bn impairment charge related to brands in the Gillette indefinite-lived intangible portfolio was also recorded.

2. Lumen Technologies, Inc. (fka Century Link)

- Recognized an aggregate of $\$ 6.5$ bn in goodwill impairment across several reporting units. Competitive pressures contributed to revenue declines in a number of segments during 2019. An internal reorganization in January and a continued decline in the stock price triggered two interim impairment tests in the first quarter of 2019, leading to impairment charges.
- This tops a $\$ 2.7$ bn goodwill impairment taken in 2018 in the consumer reporting unit, which ranked as the sixth largest impairment event in our 2019 Study.

## 3. Frontier Communications Corporation

- Recognized $\$ 5.7$ bn of goodwill impairment in 2019, preceded by goodwill impairments totaling $\$ 641 \mathrm{mn}$ and $\$ 2.7 \mathrm{bn}$ in 2018 and 2017, respectively. No goodwill balance remained after the 2019 impairment.
- The series of goodwill impairments over the last three-year period have been due to continued stock price declines and lower profitability driven by sustained revenue deterioration, failure from a strategic transformation initiative in achieving improvements in revenue, shifting customer trends, questions about the long-term sustainability of the capital structure and a lower outlook for the overall industry.
- Filed for bankruptcy shortly following year-end 2019.

4．National Oilwell Varco，Inc．
－Recognized an aggregate goodwill impairment of $\$ 3.5$ bn in 2019.
－Impairment driven by certain oil and gas market indicators hitting new decade－lows（signaling a more prolonged downturn for the industry），an increase in the number of oilfield services firms（including customers）declaring bankruptcy and a drop in drilling activity in North America（with U．S．rig count experiencing its first double－digit sequential decline since 2016）．
－As an independent provider of equipment and technology to the upstream oil and gas industry，the company is highly dependent on drilling activity and global oil and gas prices．

## 5．DXC Technology

－Recognized an aggregate $\$ 6.8$ bn of goodwill impairment in the fiscal year ended March 31，2020；however，our current study only captures the $\$ 2.9$ bn recognized during calendar year 2019.
－DXC Technology was created in April 2017 by the merger of Hewlett Packard Enterprise Services and Computer Sciences Corp，which led to the recognition of a substantial amount of goodwill．Following the merger，revenues have seen annual consecutive declines，without an accompanying reduction in costs．

## 2019 U.S. INDUSTRY SPOTLIGHT

The U.S. Industry Spotlight aggregates data from Tables 1 and 2 and provides a glance at historical GWI trends and statistics, as well as a summary of the relative size and performance of each industry versus the overall universe of companies captured in the 2020 Study.

The guide below provides a brief description of the components of the U.S. Industry Spotlight.

## Goodwill Trends

Provides the aggregate goodwill balances for year-end 2014 and 2019, as
 well as the cumulative goodwill additions and impairments over that five-year period.

## Market-to-Book Ratio Distribution

Highlights the number of companies (shown in percentage terms) with a market-tobook ratio below and above 1.0. The blue shaded area to the left of the needle further separates the proportion of companies with a ratio above and below 0.5 . Although not predictive on its own, companies with a low market-to-book ratio may be at a greater risk of impairment. Reporting unit structures, their respective performance and where the goodwill resides are a few of the critical factors that must be considered in the impairment testing process.

## Impairment History

Presents annual GWI amounts and number of impairment events over the
 2015-2019 period. The median market-to-book ratio (grey line) provides some context for the annual impairment measures.

## Summary Statistics

Depicts the following calendar-year 2019 statistics for the companies
 included in the 2020 Study sample:
(i) Number of Companies; (ii) Goodwill Intensity (GW/TA); (iii) Loss Intensity ratio (goodwill impairment as a percentage of the prior year's total goodwill, or GWI/GW); (iv) Percent of Companies with Goodwill; (v) Percent of Companies with Goodwill that Recorded a Goodwill Impairment; and (vi) Median Market-to-Book ratio.

Size of Industry Sectors
Represents the aggregate size of the companies within an industry sector relative to
 the combined size of all the companies included in the 2020 Study sample, measured in terms of market capitalization at the end of 2019.

## Index

Shows the five-year cumulative returns of 10 industries as represented by
 the respective S\&P 500 sector indices versus the performance of the overall S\&P 500 Index over the 2015-2019 period. Summarizes the relative performance of each industry reflecting what a $\$ 1$ investment at the end of 2014 would be worth at the end of 2019.

## APPENDIX: COMPANY BASE SET SELECTION AND METHODOLOGY

The 2020 Study focused on financial data for U.S.-based publicly traded companies filing under U.S. GAAP for the period 20152019. The primary sources of data for the 2020 Study were S\&P Capital IQ platform, as well as individual company annual and interim financial reports.*

The 2020 Study relies upon the $\mathrm{GICS}^{\circledR}$ structure as of the end of calendar year 2019 for industry classification purposes. In September 2016, MSCI and S\&P Dow Jones Indices separated exchange-listed equity REITs and other listed real estate companies from the Financials industry to create a new Real Estate GICS ${ }^{\circledR}$ industry sector. However, for purposes of the 2020 Study, statistics continue to be compiled for the combined Financials \& Real Estate industry. ${ }^{+}$

In September 2018, the GICS ${ }^{\circledR}$ structure was further revised to reflect the evolution and convergence of telecommunications, media and internet companies. As a result, the Telecommunication Services sector was broadened and renamed to Communication Services. The renamed sector includes existing telecommunication firms as well as firms selected from the Consumer Discretionary and Information Technology sectors. ${ }^{\ddagger}$

The following procedures were used to arrive at the 2020 Study dataset, which was used to calculate all ratios and summary statistics throughout the 2020 Study.

- American Depositary Receipts (ADRs), exchange traded funds (ETFs) and Closed End Funds were excluded from the dataset leaving 9,002 U.S.-based, U.S.-traded companies as of March 13, 2020.
- From this set, further excluded were companies identified as consolidated subsidiaries of other companies also within the dataset or not deemed to be publicly traded U.S. firms in 2019, resulting in a base set of 8,896 companies. ${ }^{5 * *}$
- The current methodology was first applied in the 2015 Study. The prior selection process excluded companies that did not have stock returns data over the prior five-year period; this restriction was removed in 2015. The five-years returns data selection criterion had been deemed relevant in previous studies, which were performed shortly after the financial crisis of 2008-2009.
- Financial data for all companies in the 2020 Study was adjusted, when applicable, to a calendar year-end (rather than the most recent fiscal year-end) to examine impairments over a specific period of time, regardless of company-specific choices of fiscal year. Financial data was also adjusted to include GWI amounts disclosed within discontinued operations or disposal groups, when identified.

[^0]:    *Information collected through January 28, 2021.

[^1]:    * The 2020 Study only captures companies that are incorporated in the U.S. Therefore, certain companies that are incorporated outside of the U.S. are excluded from our analyses, even if they are viewed as U.S. companies by financial markets. If such companies were included, total GWI in 2019 would, at a minimum, increase by Schlumberger's $\$ 8.8$ bn impairment, leading to an aggregate $\$ 79.9$ bn and thereby exceeding the 2018 GWI total amount.
    ${ }^{+}$Source: S\&P Capital IQ platform. M\&A activity based on transactions closed in each year, where U.S. publicly traded companies acquired a $50 \%$ or greater interest.

[^2]:    ＊The company impaired goodwill from the prior year，as well as a portion of goodwill related to newly acquired businesses in 2019，leading to a GWI／GW ratio greater than $100 \%$ ．

[^3]:    ＊Revisions to the Global Industry Classification Standard（GICS ${ }^{\circledR}$ ）structure in 2018 affect historical comparability on an industry basis．See Appendix for more information on the methodology．

[^4]:    ＊＊Amounts shown are aggregates．Differences due to rounding．

[^5]:    * Revisions to the Global Industry Classification Standard (GICS ${ }^{\star}$ ) structure in 2018 affect historical comparability on an industry basis. See Appendix for more information on the methodology

[^6]:    * S\&P Global Market Intelligence; S\&P Capital IQ platform. S\&P Global Market Intelligence is a division of S\&P Global, Inc. Adjustments made to financial information contained in
    
    
     observed for goodwill impairments.
     for the first time since the creation of GICS ${ }^{\circledR}$ structure a new eleventh sector for real estate. However, due to a limited sample size, compiling some of the goodwill impairment statistics for a stand-alone Real Estate industry would not result in meaningful comparisons. Therefore, we elected to continue to aggregate statistics for a combined Financials and Real Estate industry.
    * Structure revisions that were introduced in September 2018 may impact industry level comparisons from prior years. For information on the structure revisions, see https://www.msci.com/gics.
    §The dataset includes firms classified by S\&P Capital IQ as Public Investment Firms. In prior studies, this category of companies was excluded because it primarily consisted of
    
     those that appeared to have an operating nature. This step added over 240 companies to the dataset.
    
     impairments), we excluded the financial results of any subsidiary companies from the dataset that met this criterion.
