Cyber Risk Management & Breach Response

Take your organization’s cyber security to the next level with Kroll

- Safeguard your business operations and competitive edge
- Stay ahead of new regulations and consumer expectations
- Investigate and respond to incidents with speed and confidence
Your data is one of the most valuable commodities in the world today – and it’s constantly at risk.

Today, data represents one of the most complex risks for your organization’s operations, reputation and bottom line. In fact, for the first time in 10 years, executives surveyed for Kroll’s Global Fraud & Risk Report 2017/2018¹ said the number-one fraud their organization had experienced was information theft, loss, or attack. The stakes have never been higher for your organization to get cyber security right. Kroll can help.

Kroll brings your organization all the benefits of world-renowned cyber security experts, ground-breaking technology, and a global footprint to tackle risks wherever they arise. Combined, they provide you with the most innovative and comprehensive resources in cyber risk assessment, investigations, and reporting. The ultimate advantage is Kroll’s extensive investigative experience, grounded in the same responses to complex risk management challenges that clients have entrusted to us since 1972.

INFORMATION THREAT ASSESSMENTS

Kroll offers a wide range of customizable internal and external cyber risks assessments. Our goal is to help validate current data protection measures, highlight vulnerabilities or gaps, and provide recommendations to strengthen your cyber defenses.

- Proactive Security and Risk Assessments
- Maturity Reviews
- Data Privacy Officer (DPO) Advisory Services for GDPR
- Interim CISO Services
- Cyber Policy Review and Design
- Cyber Awareness Training
- Incident Response Plan and Tabletop Exercises
- Penetration Testing and Vulnerability Scanning
- Third Party Reviews
- QSA Services for PCI
- Managed Endpoint Detection and Response
- Deep, Dark, and Surface Web Monitoring
- Compromised Payment Card Detection
- Cyber Security Compliance Audit for GDPR, NY DFS 500, HIPAA, and others

Kroll in Action: Deep & Dark Web Monitoring | Fortune 100 Financial Services Company

Kroll’s deep and dark web intelligence solution, CyberDetectER® DarkWeb, identified a post on a forum located on the TOR network containing over 1,500 credit card numbers, along with all the information needed to compromise the cards and use them for fraudulent purposes. Approximately 250 of these cards were issued to consumers by one of Kroll’s clients in the financial services industry.

Because it was protected by CyberDetectER® DarkWeb, the client was able to quickly identify its affected customers and take action on the issued credit cards, minimizing the possibility of fraudulent transactions on these cards. This in turn helped bolster customer satisfaction and preserve the relationship, producing a competitive edge in a crowded sector of credit card providers.

Kroll was retained by a large entertainment company when unreleased images and footage of an unfinished film production were leaked on the internet and distributed electronically among online fan communities. The objective of the investigation was to determine how the leaked content was obtained, to stop the leaks, locate the perpetrators, and recover the stolen content.

Kroll’s work spanned four continents and included the following key components: detailed computer forensic analysis; identifying and analyzing the distribution chain of the leaked images in order to determine the source of the leaks; the development of a global network of confidential informants; and informative and confrontational interviews.

Kroll successfully identified the source of the leaks to a computer hacker in a remote province of Latin America who confessed to Kroll investigators during a confrontational interview. As a result of Kroll’s work, the entertainment company initiated criminal and civil actions against the hacker. In addition, Kroll successfully recovered significant amounts of the film’s footage that had not yet been leaked.

A desktop computer was stolen from the unlocked car of an IT employee at a large hospital. It was determined that the computer housed nearly 500,000 patient records containing name, date of birth, Social Security number, address and medical history information. The client believed multiple thefts had occurred at the hands of insiders, but Kroll’s meticulous investigation revealed that no employees were involved in equipment theft, and the lone computer had been stolen.

While the investigation was underway, Kroll helped the hospital prepare for breach notification. They re-created a list of affected individuals, which revealed a large percentage of both duplicated entries and old data. Kroll was able to de-duplicate the file and update the old addresses. Through this standardization process, Kroll reduced the list to roughly 360,000 entries.
Global Cyber Expertise

Many of our cyber professionals bring years of unique experience from their former service with law enforcement and regulatory agencies:

- Federal Bureau of Investigation (FBI)
- Interpol
- U.S. Department of Justice (DOJ)
- Securities & Exchange Commission (SEC)
- U.K. Intelligence and Policing
- Europol
- Hong Kong Police Force
- U.S. Department of Homeland Security (DHS)
- U.S. Secret Service (USSS)
- U.S. Attorney’s Office

Subject matter experts include computer forensic analysts, forensic accountants, information security analysts, former prosecutors, business intelligence analysts, and investigative journalists.
